

# AquaMind AI

Predictive water-network intelligence for early leak-risk insight

## Problem

Hidden leaks and pressure anomalies often become visible only after operational loss has already occurred.

## Solution

AquaMind reads pressure and flow behavior, detects abnormal patterns, and turns them into clear operator decisions.

## Current Stage

Functional browser dashboard using synthetic hydraulic data. Field validation is the next proof point.

## Sense

Pressure + flow data from the water network.

## Analyze

Anomaly patterns and zone-level leak-risk signals.

## Act

Actionable alert and recommended operator response.

## Ask

Pilot partner, real utility data, and DMZ technical mentorship.

Founder: Mohammed Tariq Al-Saqqaf - Mechatronics Engineer / Lead Innovator. Prototype data: synthetic only. Next milestone: real-world utility pilot validation.
